Curtain wall

This system is very different from the profiles used for the door and window applications, not just in the way it looks but also in the way it's glazed.

It is assembled on site using pressure plates and pressure plate screws to grip the glass and hold it in place. Aluminium capping, powder coated to the colour of choice, is applied over top to cover the robust looking pressure plate and its fixing points.

Using a variety of profile depths we are able to provide an aesthetically pleasing method of glazing over a large span using any thickness of glass.

Curtain wall profile is also an effective system for the outside of buildings, typically office buildings, for the use of blast resistant and impact resistant glazing.

Our finishes include Standard RAL Colours and Metallic, Satin Stainless Brushed and Mirror Finished Polished Stainless Steel. Profiles are available in pre-galv, electric galv, or stainless steel – 304 grade or 316 grade.
