- ▶ *Steel Bullet Resistant Glazing Systems*

Fire Rated Screens & Windows:

Much like the door systems, however with less ironmongery, these profiles are available in pre galv, electric galv or stainless steel – 304 grade or 316 grade.

These applications are available in an E30 system up to an E120 system, or from an Ei30 system up to an Ei60 system.

Our finishes include Standard RAL Colours and Metallic, Satin Stainless Brushed and Mirror Finished Polished Stainless Steel. Profiles are available in pre-galv, electric galv, or stainless steel – 304 grade or 316 grade.

Our window applications can be fitted with a double glazed or single glazed unit depending on whether it is an internal or external application. We can also install fire resistant panels finished to Standard or Metallic RAL colours.

Butt Jointed System:

We offer a variety of butt jointed systems in different ratings. Our systems offer ratings from an E30 up to an Ei60 system. We can also offer slim line profiles on certain systems for the outer frame to minimise the amount of frame work seen by our customer. A clear silicone joint can be used where the glass butts together so hardly any of the joint is noticeable.
