- ▶ *Steel Bullet Resistant Glazing Systems*

### Rooflights:

Much like the fixed light and screen systems, however with no ironmongery, these profiles are available in pre galv, electric galv or stainless steel – 304 grade or 316 grade.

These applications are available in an E30 system up to an E120 system, or from an Ei30 system up to an Ei60 system.

Our finishes include Standard RAL Colours and Metallic, Satin Stainless Brushed and Mirror Finished Polished Stainless Steel. Profiles are available in pre-galv, electric galv, or stainless steel – 304 grade or 316 grade.

Our roof light applications can be fitted with a double glazed or single glazed unit depending on whether it is an internal or external application. We can also install fire resistant panels finished to Standard or Metallic RAL colours.
